1 Getting Started

1.1 Introduction

To help you integrate Purolator E-Ship Web Services into your website or application, Purolator provides technical documentation and sample code for each Web Service. The documents describe how to consume each Web Service and detail Purolator's service offerings. In addition to this document, additional information and support is available on the Developers Forum <http://www.purolatorwebservices.com> and also on the E-Ship Web Services Wiki <http://www.purolatorwebservices.com/wiki2>.

The following documents can be downloaded by registered Purolator E-Ship Resource Centre users in the Documentation and Sample Code section.

Introduction

Introduction to Purolator E-Ship Web Services

Service Availability Web Service

Validate the origin and destination addresses and receive all available Purolator services, products, options and associated rules.

Estimates Web Service

Receive estimates based on origin and destination addresses as well as package and service inputs. Estimates are available as quick estimates using list prices or detailed estimates for customers with negotiated pricing.

Shipping Web Service

Create domestic, U.S. and international shipments. Please note that shipping labels and documents are created using the Get Documents Web Service.

Pickup Web Service

Schedule/Modify/Delete/View history for pickups.

Returns Management Web Service

Create domestic Returns Management shipments. Please note that shipping labels and documents are created using the Get Documents Web Service.

Get Documents Web Service

Retrieve shipment labels and documentation for Purolator shipments and Returns Management shipments.

Tracking Web Service

Get detailed tracking information for all Purolator shipments.

Test Cases

Test cases and expected results for all Purolator E-Ship Web Services.

The following documents will be provided when you are ready to take your website or application into Purolator's production environment.

Production Readiness

Guidelines to help ensure your Purolator E-Ship Web Services integration is ready to promote into Purolator's production environment.

Security Options

Security options available for your Purolator E-Ship Web Services implementation.

1.2 Document Overview

This document is a technical specification that describes the Purolator Service Availability Web Service. It is geared towards developers whose application requires a list of valid Purolator Service Offerings. For a given origin and destination the Purolator Service Availability Web Service returns a list of all services, special services and options that are available. This includes premium Express and Ground services, U.S. and International Services, ExpressCheque and Dangerous Goods Options. This web services also performs postal code and zip code validation and can also return the rules associated with each service- for example, the minimum and maximum allowed shipment weights.

This document uses the following structure to explain Purolator's E-Ship Tracking Web Service:

Introduction (this chapter)

- Web Services overview
- Specification compliance and development platform compatibility
- Related resources

Web Services

- Explanations of the characteristics of calls, as well as data types used
- Security information
- Service details for the Service Availability service
- Error details and error codes and descriptions

Appendix

- Complete field listing
- Enumeration and expected values

1.3 Specification Compliance

The Web Services are designed to comply with the following specifications:

Specification Name	Website
Simple Object Access Protocol (SOAP) 1.1	http://www.w3.org/TR/2000/NOTE-SOAP-20000508/
Web Service Description Language (WSDL) 1.1	http://www.w3.org/TR/2001/NOTE-wsdl-20010315

Please visit the websites listed above for detailed information regarding SOAP and WSDL technologies.

1.4 Development Platforms

The Web Services work with any current SOAP/XML development environments, including, but not limited to, Visual Studio .NET 2005, JAVA, and PHP.

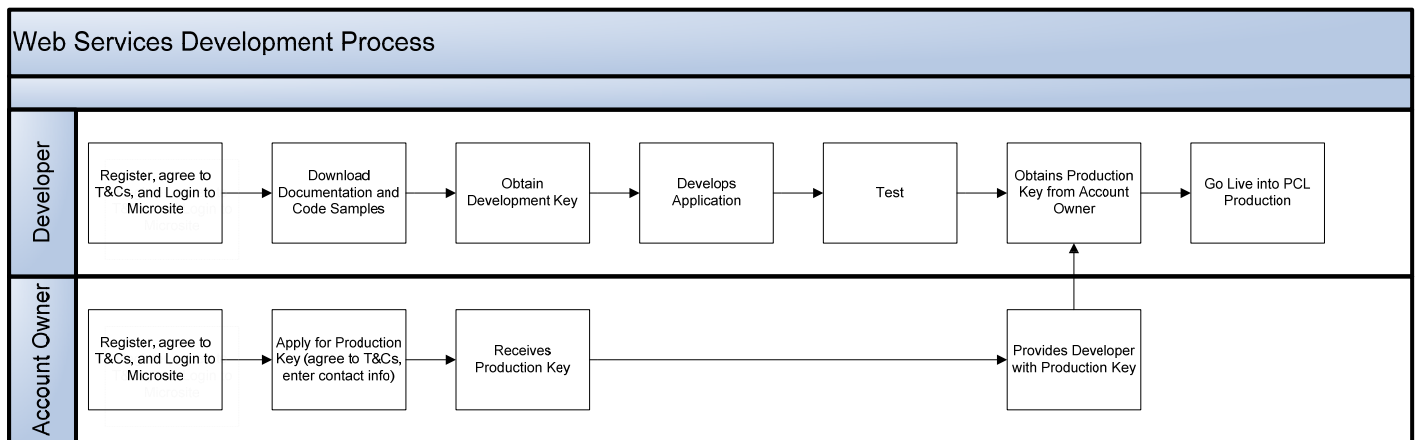

Note: Development platforms vary in their SOAP/XML implementations. Please refer to your platform's documentation for more information.

1.5 Related Resources

The Purolator E-Ship Developer Centre provides a full suite of documentation, sample code, sample SOAP messages, community-based support, and other resources to help you with your development projects. Be sure to visit <http://eship.purolator.com> to signup for a developer account.

1.6 Purolator E-Ship™ Web Services Development Process

To integrate Purolator E-Ship Web Services within your application, follow the steps outlined below. After registering for the Purolator E-Ship™ Resource Centre, both the Purolator account holder and software developer will have access to all resources on the Resource Centre website.

Web Services Developer Process

Step 1: Register

Sign up for the Purolator E-Ship Resource Centre to access all Web Services' resources.

Step 2: Download Documentation and Code Samples

View code samples and documentation for the Purolator E-Ship Web Service(s) you will be using.

Sample code such as; C#, Java, PHP, SOAP/XML as well as WSDL is available and can be found at the Purolator E-Ship Developer Resource Centre at:

<http://www.purolator.com/eship/samplecode>

Documentation, including testing documentation is available at <http://www.purolator.com/eship/documentation>.

Step 3: Obtain Development Key

Apply for a Development Key. This will allow you to test your code in the Purolator E-Ship Test Environment.

Apply for a development key (including a development password, and test account number) at

<http://www.purolator.com/eship/development>.

Note: The key, account number and password will be used to access the development environment at <https://devwebservices.purolator.com/EWS/V1/ServiceAvailability/ServiceAvailabilityService.aspx>

Step 4: Develop

Develop your application using the code samples and documentation.

Step 5: Test

Test your application in the Purolator E-Ship Test Environment. Data in the Test Environment is sample data and should be used for testing purposes only. Recommended test cases with expected results are provided in the documentation.

Step 6: Obtain Production Key from Purolator Account Holder

When your development and testing are complete, replace the Development Key with the Production Key. You can obtain the Production Key from the Purolator account holder. Once activated, the Production Key will allow you to access account-specific shipping, tracking, estimates and returns information. Optional security features are available through consultation with Purolator.

Note: The key, account number and password will be used to access the production environment at <https://webservices.purolator.com/EWS/V1/ServiceAvailability/ServiceAvailabilityService.asmx>.

Step 7: Go Live

Launch your application with Purolator E-Ship Web Services.

Purolator Account Holder Process

Step 1: Register

Sign up for the Purolator E-Ship™ Resource Centre to access all Web Services' resources.

Step 2: Apply for a Production Key

To use Purolator E-Ship™ Web Services, you must apply for a Production Key. The Production Key will allow you to access shipping, tracking, estimates and returns information specific to your Purolator account. A Purolator representative may contact you for security purposes before your Production Key is activated. Optional security features are available through consultation with Purolator.

Apply for a production key (including a production password) at <http://www.purolator.com/eship/production>.

Step 3: Provide your developer with the Production Key

Ask your developer to replace their Development Key with your Production Key. You will then be ready to use Purolator E-Ship Web Services.

Step 4: Go Live

Launch your application with Purolator E-Ship Web Services.

2 Web Services

Web Services is a collection of programming technologies, including XML, Web Services Description Language (WSDL) and SOAP, which allow you to build programming solutions for specific messaging and application integration.

Web Services are, by definition, platform independent. Purolator Web Services allow developers to build custom applications that are independent of changes to the Purolator interface. This is achieved through backwards compatibility support for all versions of the web services.

2.1 Characteristics of Calls

All Web Service calls are:

- **Service Requests and Responses**—your client application prepares and submits a service request to Purolator E-Ship Web Services, which is processed and a response is returned, and the client application handles the response.

- **Synchronous**—once the API call is invoked, your client application waits until it receives a response from the service. Asynchronous calls are not supported.

2.2 Data Types

Value	Description
String	Character strings. Fields that are of data type string contain text and some have length restrictions. Please see the field reference list for format and restrictions.
Decimal	Decimal represents a subset of the real numbers, which can be represented by decimal numerals. The <u>value space</u> of decimal is the set of numbers that can be obtained by dividing an integer by a non-negative power of ten, i.e., expressible as $i / 10^n$ where i and n are integers and $n \geq 0$. Precision is not reflected in this value space; the number 2.0 is not distinct from the number 2.00. (The datatype <code>precisionDecimal</code> may be used for values in which precision is significant.) The order relation on decimal is the order relation on real numbers, restricted to this subset.
Int	The <code>precisionDecimal</code> datatype represents the numeric value and (arithmetic) precision of decimal numbers which retain precision; it also includes values for positive and negative infinity and for "not a number", and it differentiates between "positive zero" and "negative zero". This datatype is introduced to provide a variant of decimal that closely corresponds to the floating-point decimal datatypes described by the expected forthcoming revision of IEEE/ANSI 754. Precision of values is retained and values are included for two zeroes, two infinities, and not-a-number.
Enumeration	Enumeration constrains the <u>value space</u> to a specified set of values. Enumeration does not impose an order relation on the <u>value space</u> it creates; the value of the <u>ordered</u> property of the derived datatype remains that of the datatype from which it is derived.

2.3 Security

Purolator E-Ship Web Services authentication uses the standard HTTP Basic Authentication method allowing client programs to provide credentials in the form of a user name and password when making an HTTP request. Purolator E-Ship Web Services uses the standard HTTP protocol and in our case the username corresponds to the Development and Production Key that is issued to you by Purolator when you signed up for Purolator E-Ship Web Services. These credentials are sent from your client programs to our Purolator E-Ship Web Services servers securely using SSL.

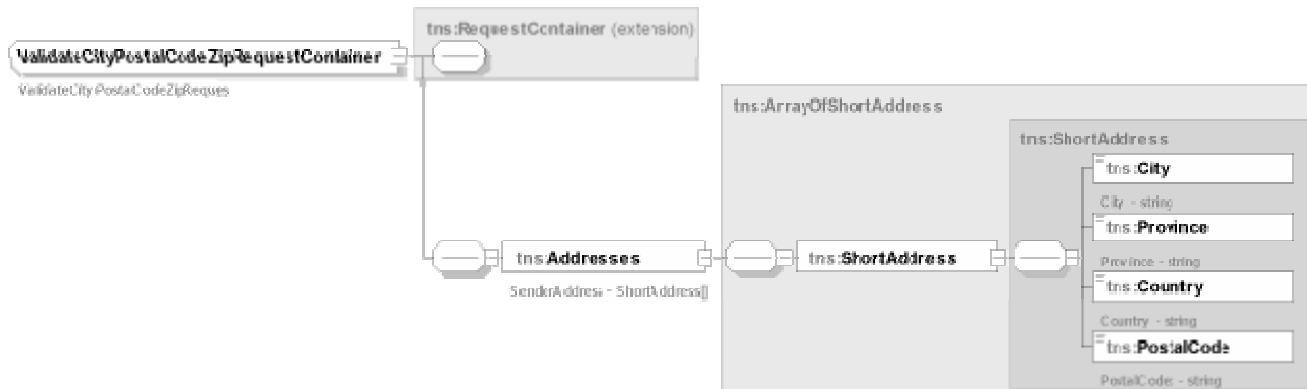

2.4 Service Methods and Objects

The following section will highlight the various methods associated with the shipment service. As well, visual representations will depict the XML schema of both the requests, and the responses of the service calls.

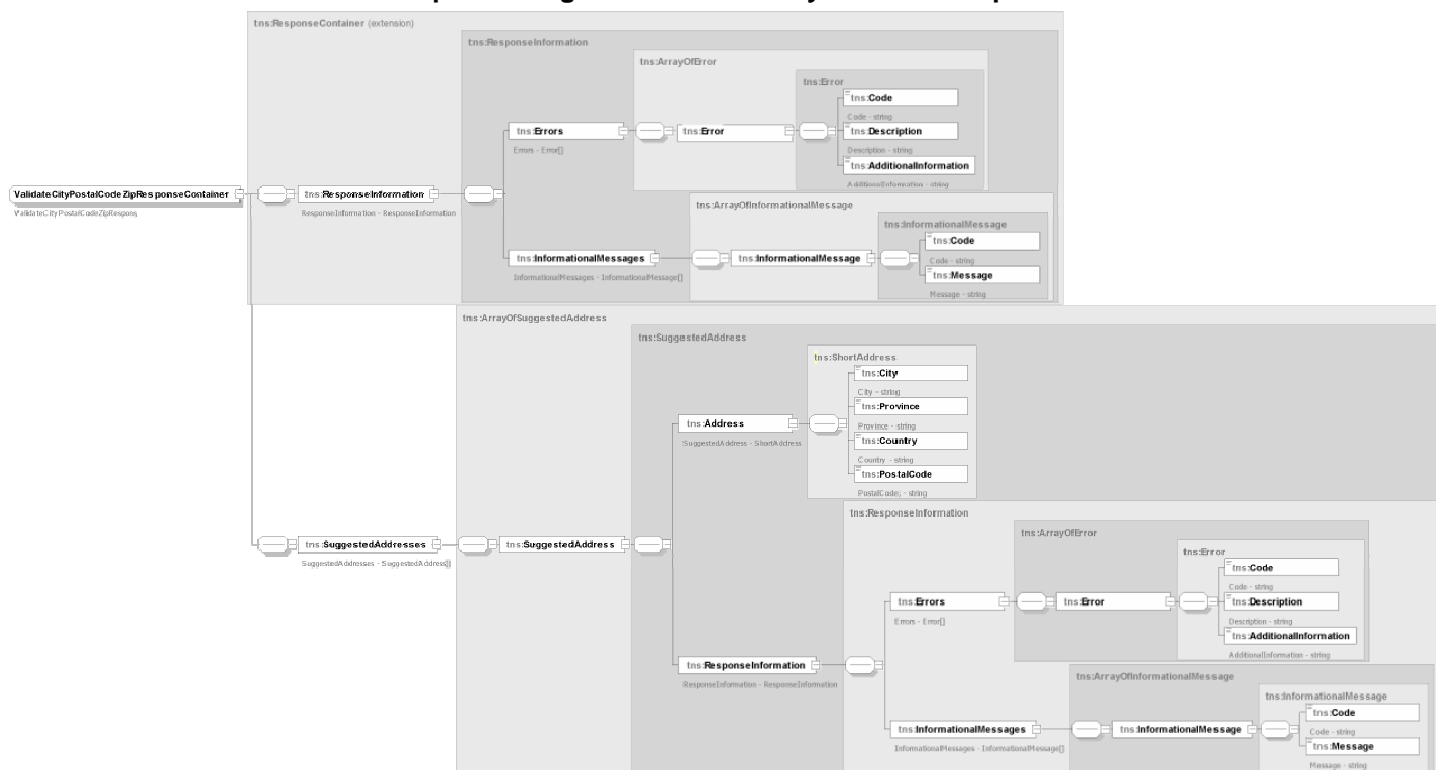

2.4.1 Validate City/Postal Code/Zip Code

The `ValidateCityPostalCodeZip` method validates that the city/province (state)/postal (zip) code entered is correct. Should the combination be incorrect, the response message will return suggested values, based on the information entered.

2.4.1.1 Request Diagrams – ValidateCityPostalCodeZip

2.4.1.2 Response Diagrams – ValidateCityPostalCodeZip

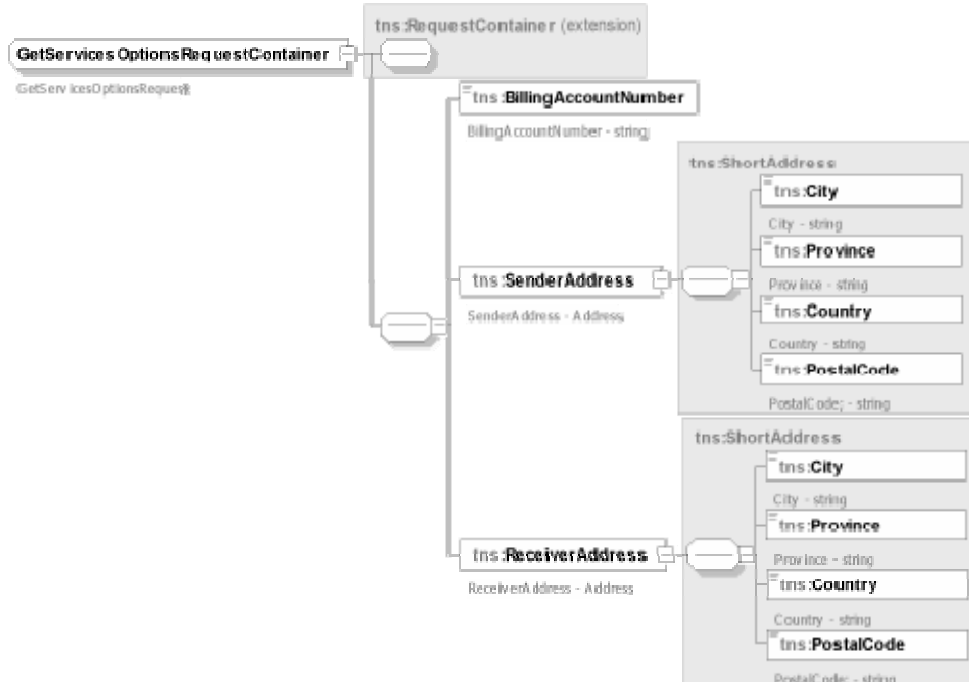

2.4.2 Get Services Options

The `GetServiceOptions` method returns all available Purolator services for the specified origin and destination addresses.

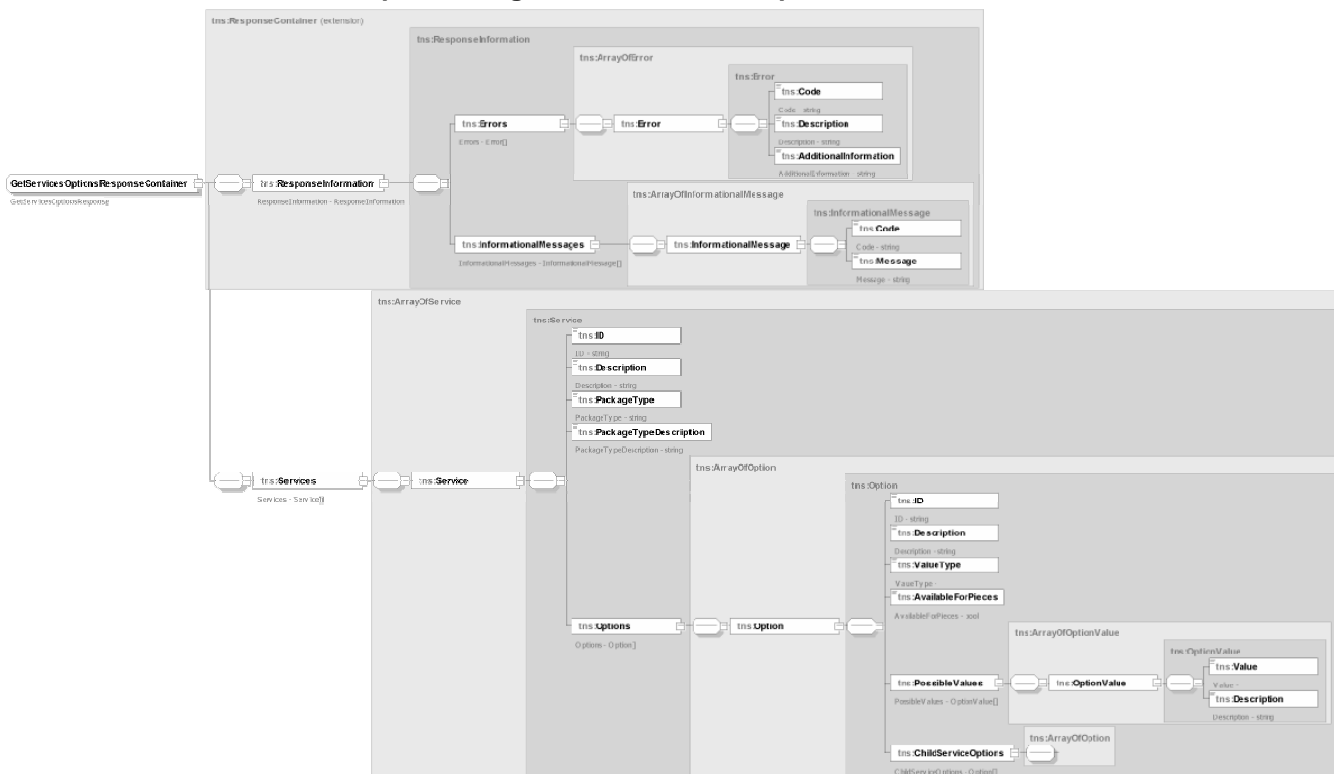

2.4.2.1

Request Diagrams – GetServiceOptions

2.4.2.2

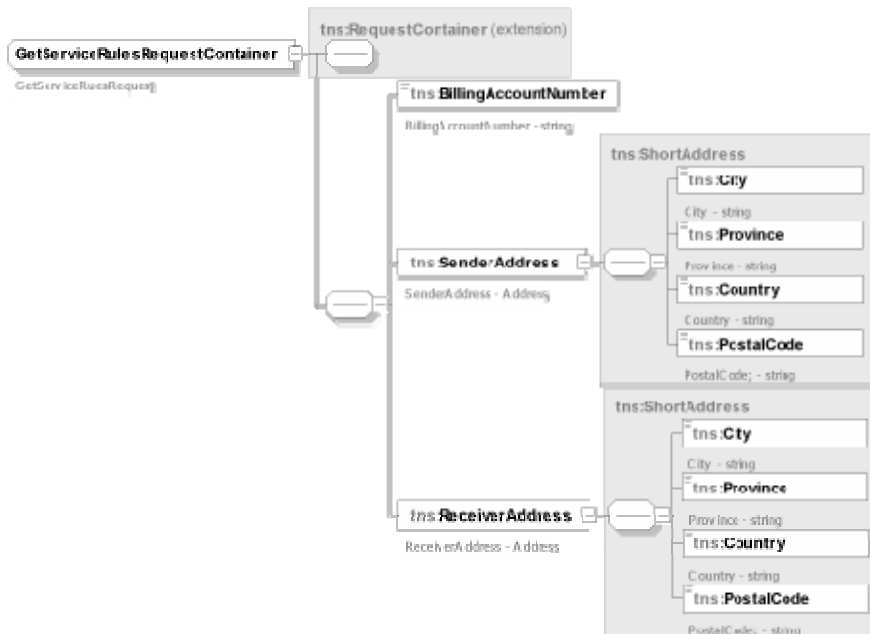

Response Diagrams – GetServiceOptions

2.4.3 Get Service Rules

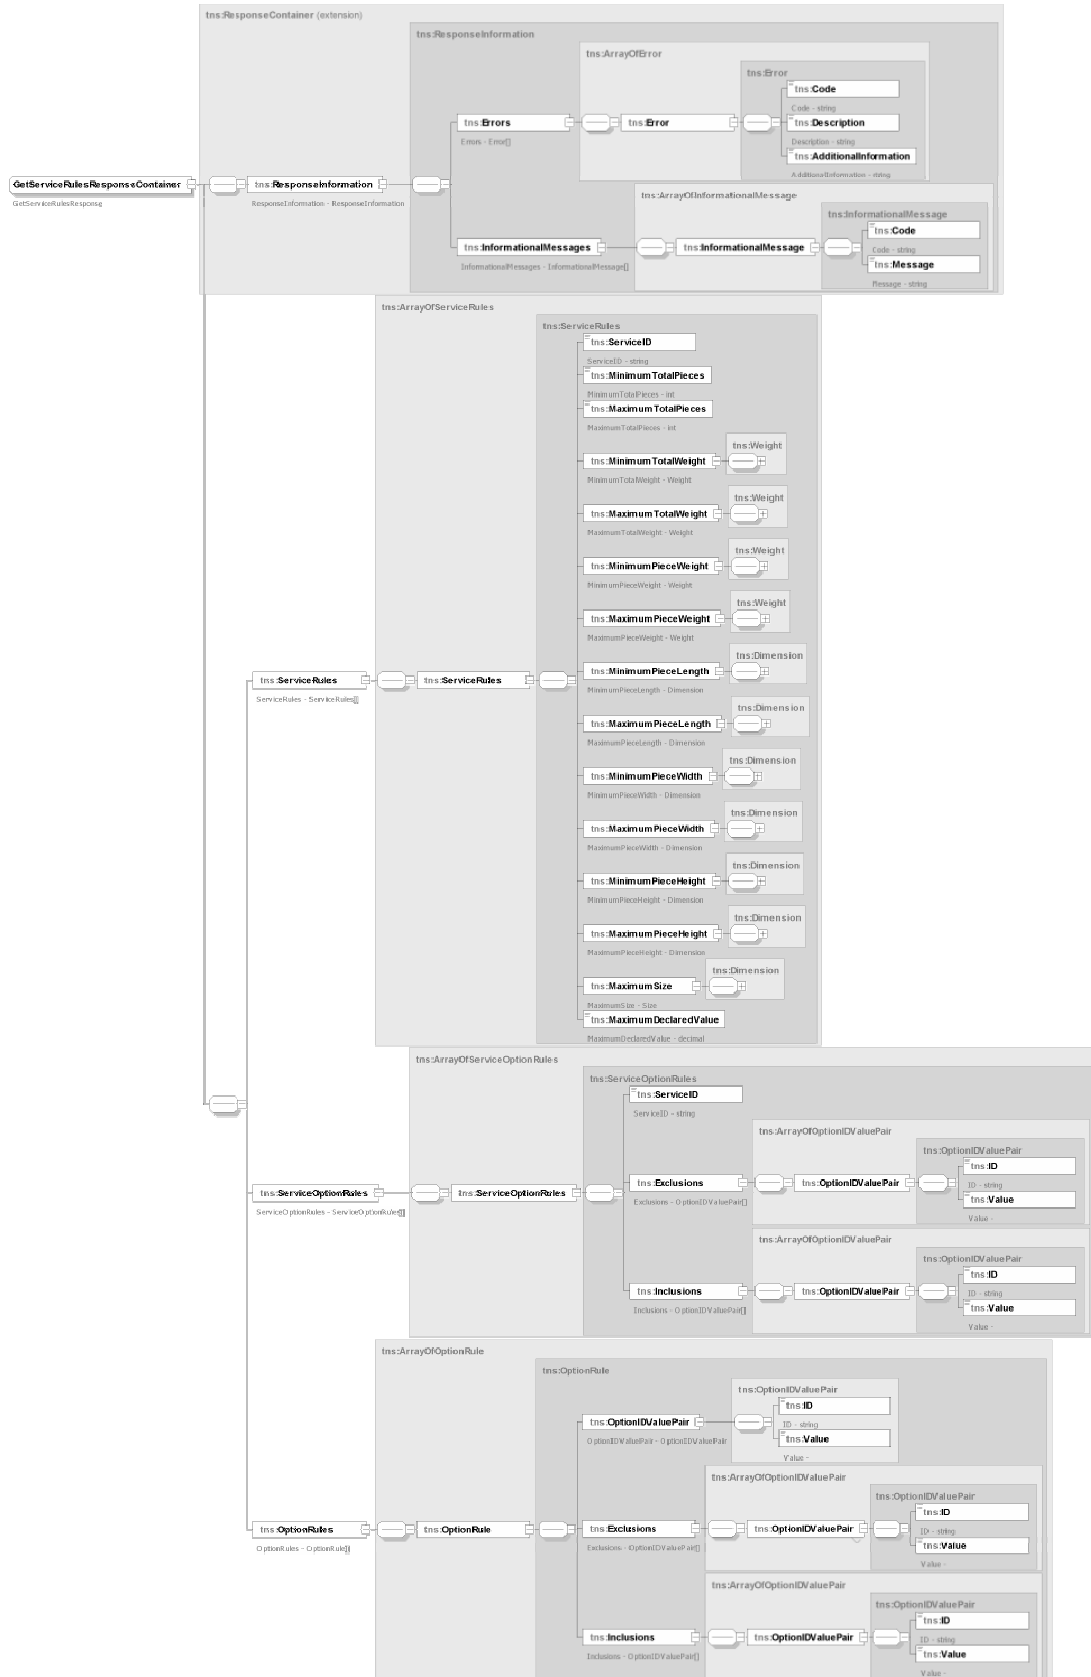

The GetServiceRules method returns all available Purolator products and options, as well as all the rules associated with the products and options. This includes all product min/max weights and dimensions, min/max pieces, product inclusions and exclusions, as well as option inclusions and exclusions.

2.4.3.1 Request Diagrams – GetServiceRules

2.4.3.2

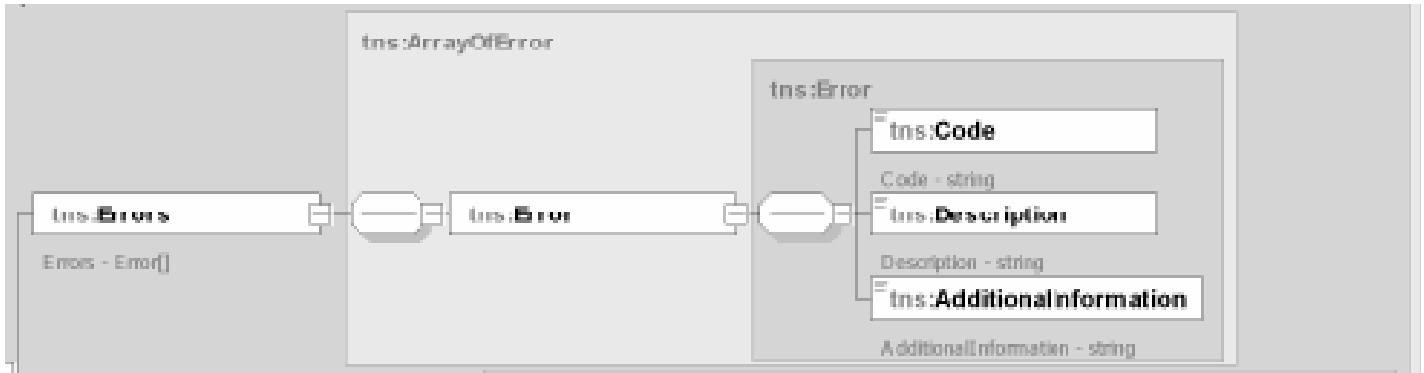

Response Diagrams – GetServiceRules

2.5 Error Handling

The Web Service calls return error data that your client application can use to identify and resolve runtime errors. If an error occurs during the invocation of most Web Services calls, then the API provides the following types of error handling:

- For errors resulting from badly formed messages, failed authentication, or similar problems, the Web Services returns a SOAP fault message.
- For errors resulting from a problem with the information sent to Purolator's systems, error codes and error descriptions are returned to the client application.

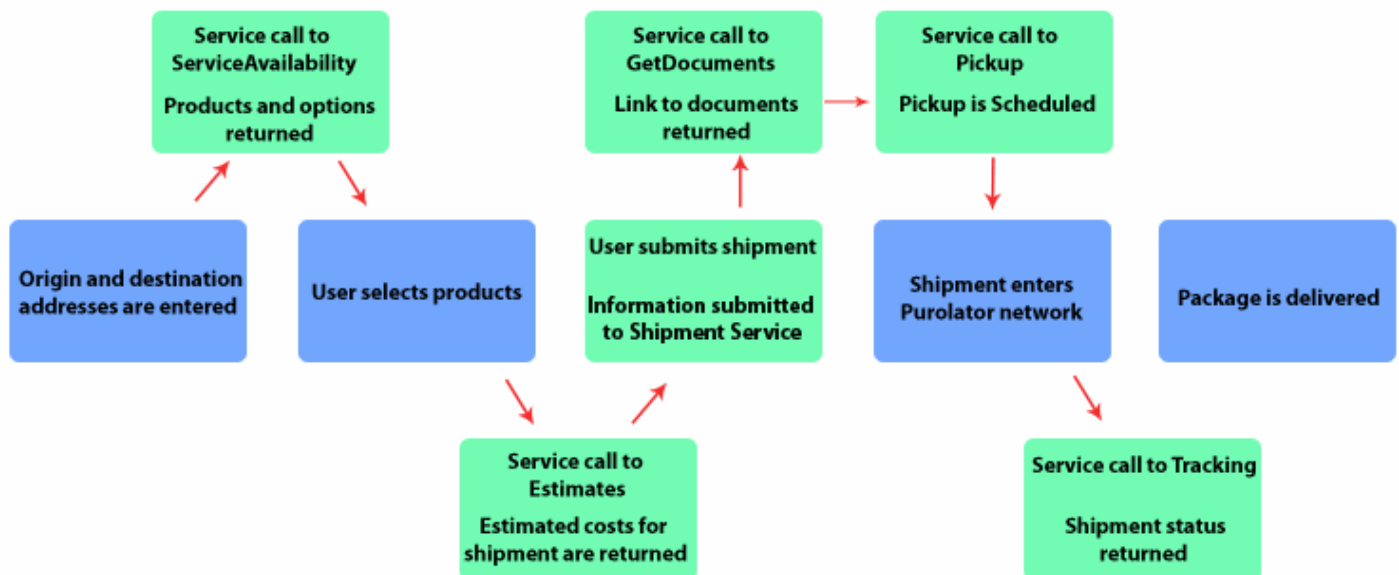

2.6 Implementation Considerations

As Purolator's business changes to meet the on-going needs of its customer, the business rules for certain products may change from time to time. As our business changes, your application doesn't have to. Purolator E-Ship Web Services offers customers an advanced Service Availability service that, when called, will return available products and services for a given origin and destination address. In addition to the available products and services, all business rules as well as product rules, product inclusions and exclusions, and products min/max dimensions and weights.

This can be used to offer your customers a greater experience, and offer all of Purolator's products and services, without needing to submit a request, only to discover that a particular product is not available for a particular address.

As well, additional Purolator E-Ship Web Services can be consumed to offer a richer customer experience. From estimates to tracking to retrieving necessary documentation, Purolator's E-Ship Web Services are designed to offer you the flexibility to consume the services required for your business.

Below is an example of how the all Purolator E-Ship Web Services may be utilized. (Green boxes denote service calls)

2.7 Error Messages / codes

Below is a list of all the error codes and descriptions.

Web Service Error

Code	Message
1000100	System exception occurs.
1001171	Service Id is a Mandatory Field.
1100000	One or more errors have occurred.
1100100	Field is missing.

Code	Message
1100101	The Account Number is a mandatory field.
1100102	The Account Name is a mandatory field.
1100103	The Account Number is a mandatory field.
1100104	The City Name is a mandatory field.
1100107	The Country is a mandatory field.
1100110	The Package Type is a mandatory field.
1100115	The Postal Code is a mandatory field.
1100116	The Province is a mandatory field.
1100119	The Service Mode is a mandatory field.
1100123	The State is a mandatory field.
1100128	The User Type is a mandatory field.
1100131	The Receiver Address is a mandatory field.
1100132	The Receiver City is a mandatory field.
1100133	The Receiver Country is a mandatory field.
1100147	The Zip Code is a mandatory field.
1100200	Field is invalid.
1100202	City is invalid.
1100204	Country is invalid.
1100207	Package is invalid.
1100208	Phone Country Code is invalid.
1100213	Postal Code is invalid.

Code	Message
1100214	Province is invalid.
1100216	Service Mode is invalid.
1100217	State is invalid.
1100226	Country Code is invalid.
1100227	Premium Service Code is invalid.
1100241	Zip Code is invalid.
1100242	Receiver City is invalid.
1100243	Receiver Country is invalid.
1100266	Piece Weight is invalid.
1100275	Product Number is invalid.
1100285	Number of Shipments is Invalid.
1100400	Account object not initialized.
1100401	Account number is invalid.
1100407	Either both service point hierarchies are provided or none.
1100411	Account Status is invalid.
1100419	Postal Code is invalid.
1100426	Country Code is invalid.
1100427	City is invalid.
1100438	City not found.
1100454	Premium Services are only valid for Domestic shipments.
1100455	The specified Postal Code is valid for the City, Province: %city%, %province%.

Code	Message
1100465	Unable to retrieve Account information for Account %accountNo%.
1100468	Failed to find City Name.
1100491	Product is invalid.
1100497	An error occurred with your request. Please try again later.
1100500	Your request failed. Please call 1-888-SHIP-123 or 1-888-744-7123 for assistance.
1100505	Undefined Account Type for Account %account%.
1100506	%characteristicName% must be numeric.
1100507	%characteristicName% must be one of %validTypes%
1100508	%characteristicName%%characteristicValue% is not valid with %characteristicName2%%characteristicValue2%
1100535	Regrettably we are experiencing technical difficulties and unable to provide all the available statuses on your U.S. shipment. We hope to have the problem rectified ASAP.
1100552	All Shipments must originate in Canada.
1100604	Receiver State is invalid.
1100605	Receiver State is a mandatory field.
1100606	Receiver Zip Code is invalid.
1100607	Receiver Zip Code is a mandatory field.
1100633	Membership Creation Failure.
1100674	Postal Code %postalCode% is only valid for %city%, %province%.
1100675	Zip Code %zipCode% is only valid for %city%, %state%.
100693	Residential Signature or Originator Signature Not Required must be selected
1100676	Invalid Printer Type.
3001099	Invalid PackageType Code: {0}. Valid values are: {1}.

Code	Message
3001100	Invalid TaxType Code: {0}. Valid values are: {1}.
3001101	Invalid DataType Code: {0}. Valid values are: {1}.
3001102	Invalid ScanType Code: {0}. Valid values are: {1}.
3001103	Invalid SignatureImageFormat Code: {0}. Valid values are: {1}.
3001104	Invalid ILLanguage Code: {0}. Valid values are: {1}.
3001105	Invalid ESOLanguage Code: {0}. Valid values are: {1}.
3001106	Invalid ESOWYesNo Code: {0}. Valid values are: {1}.
3001107	Invalid Option Code: {0}. Valid values are: {1}.
3001108	Invalid Product Code: {0}. Valid values are: {1}.
3001109	Invalid StreetType Code: {0}. Valid values are: {1}.
3001110	Invalid StreetDir Code: {0}. Valid values are: {1}.
3001111	Invalid StreetSuffix Code: {0}. Valid values are: {1}.
3001112	Invalid Country Code: {0}. Valid values are: {1}.
3001113	Invalid Province/State Code: {0}. Valid values are: {1}.
3001114	Translation Failed.
3001115	Service Call Failed.
3001116	Service Failed
3001117	A Web Service Error has occurred.
3001122	Invalid ChainOfSignature Code: {0}. Valid values are: {1}.
3001123	Invalid DangerousGoods Code: {0}. Valid values are: {1}.
3001124	Invalid DangerousGoodsClassification Code: {0}. Valid values are: {1}.

Code	Message
3001125	Invalid DangerousGoodsMode Code: {0}. Valid values are: {1}.
3001126	Invalid ExpressCheque Code: {0}. Valid values are: {1}.
3001127	Invalid ExpressChequeMethodOfPayment Code: {0}. Valid values are: {1}.
3001128	Invalid HoldForPickup Code: {0}. Valid values are: {1}.
3001129	Invalid SaturdayDelivery Code: {0}. Valid values are: {1}.
3001130	Invalid SaturdayPickup Code: {0}. Valid values are: {1}.
3001131	Invalid SpecialHandling Code: {0}. Valid values are: {1}.
3001132	Invalid TypesOfSpecialHandling Code: {0}. Valid values are: {1}.
3001133	Invalid DocumentType Code: {0}. Valid values are: {1}.
3001134	Invalid ExpressChequeAmount Code: {0}. Valid values are: {1}.
3001136	Service version is invalid
3001137	Invalid Declared Value Code: {0}. Valid values are: {1}.
3001138	Invalid OSNR Value Code: {0}. Valid values are: {1}.
3001139	Invalid registered shipping account specified in shipment
3001140	Invalid registered shipping account specified in return shipment
3001141	Postal / Zip code {0} code is not valid for Canada or U.S.
3001142	Country is not found
3001143	Suggested address is supplied
3001144	One or more addresses are invalid or suggestions are supplied
3001145	Invalid Piece Option Code: {0}. Valid values are: {1}.
3001146	Invalid Printer Type Option Code: {0}. Valid values are: {1}.

Code	Message
3001147	Invalid Address.
3001148	Postal / Zip Code is required to validate a Canadian / U.S. Address.
3001153	Service Error

Input

Field Name	Description	Allowed Value
ComplexType RequestContext	Used by: RequestContext	
Version	Version Number of the Web Service Request.	1.0 or 1.1 (Currently)
Language	Used to define the Language of the Response text.	Enumeration. en fr
GroupID	For Future Use	
RequestReference	Reference Identifier for the Service Request. Used to aid in Customer Support.	String
ComplexType GetServiceRulesRequestContainer	Used by: GetServiceRulesRequest	
BillingAccountNumber	Required. Registered billing account number	String
SenderAddress		Complex Type ShortAddress
ReceiverAddress		Complex Type ShortAddress
ComplexType GetServiceRulesOptionsContainer	Used by: GetServiceRulesRequest	
BillingAccountNumber	Required. Registered billing account number	String
SenderAddress		Complex Type ShortAddress
ReceiverAddress		Complex Type ShortAddress
ComplexType ValidateCityPostalCodeZipRequestContainer	Used by: ValidateCityPostalCodeZipRequest	
ArrayOfShortAddress		Complex Type ArrayOfShortAddress
ComplexType ArrayOfShortAddress	Used by: ValidateCityPostalCodeZipRequest	
Addresses		Complex Type Addresses
ComplexType Addresses	Used by: ValidateCityPostalCodeZipRequest	
ShortAddress		Complex Type ShortAddress
ComplexType ShortAddress	Used by: GetServiceRulesRequestContainer/ReceiverAddress GetServicesOptionsRequestContainer/SenderAddress	

Input

Field Name	Description	Allowed Value
City	Required. City	String Alpha Numeric Maximum character length 30
Province	Required. Province/State	String Enumeration See Province/State list
Country	Required. Country name	String Enumeration See Country List
PostalCode		

Output

Field Name	Description	Output Values
Element ResponseInformation	Used by: ResponseInformation	
ResponseReference Errors	Array of errors	Complex Type ArrayOfError
InformationalMessages		Complex Type ArrayOfInformationalMessages
ComplexType ArrayOfError	Used by: ArrayOfError, ResponseInformation/Errors	
Error	Error information returned by the service call.	Complex Type Error
ComplexType Error	Used by: Error, ArrayOfError/Error	
Code Description AdditionalInformation	Error Code Error Description Additional error information	
ComplexType ArrayOfInformationalMessage	Used by: ArrayOfInformationalMessage, ResponseInformation/InformationalMessages	
InformationalMessage	An array of Informational Messages as part of a response to a service request.	Array of Strings
ComplexType ArrayOfOption	Used by: Option/ChildServiceOptions, Service/Options	
Option	The ArrayOfOptionIDValuePair field is used by both the shipment element, and the piece element. This array is used to input a single or multiple characteristics to the piece and/or shipment level.	Complex Type Option

Output

Field Name	Description	Output Values
